

QUANTUM STONE

by Granite Granite Inc.

About Us

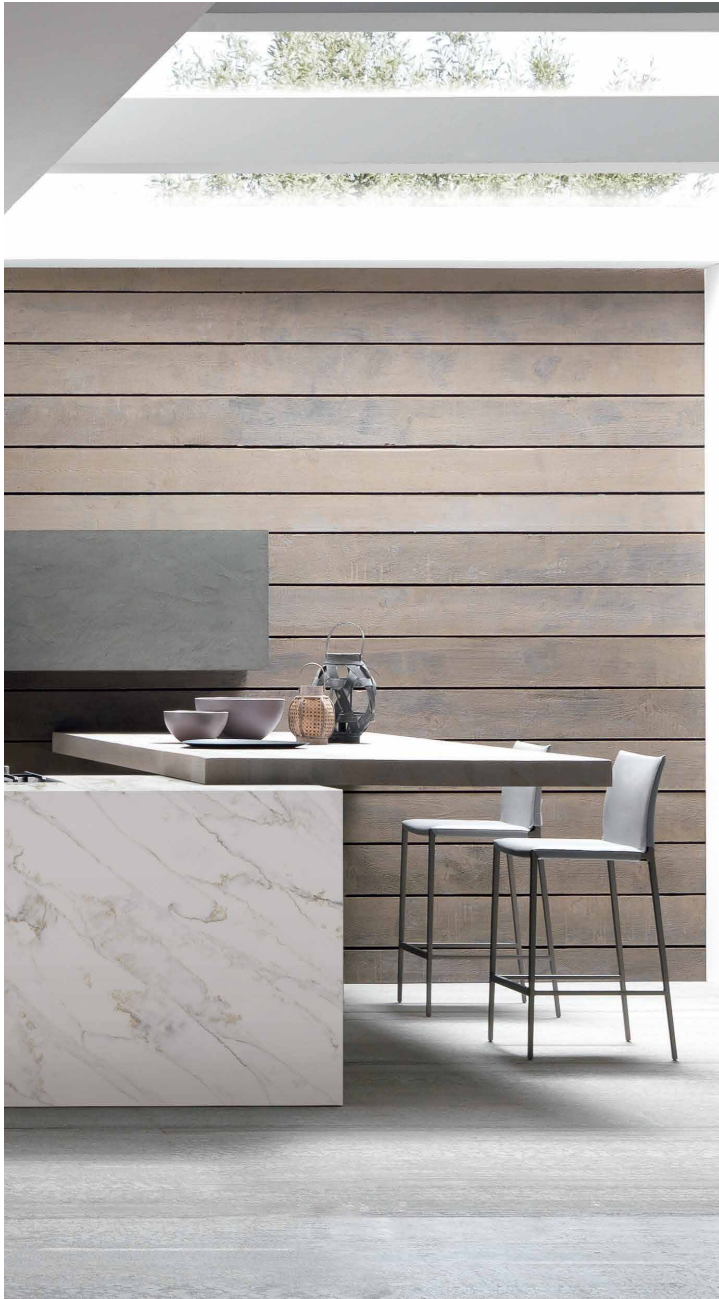

Granite Granite Inc. was founded in 2004 by Rajeev and Chhavi Khanna as a single retail flooring and countertop store in Sugar Land, Texas. Backed by a deep grounding in logistics and interior design, the company grew quickly - moving into wholesale distribution in 2008 and opening its first Houston location, earning an early reputation for globally sourced material at exceptional value.

As demand grew, so did our reach. Distribution centers opened across Corpus Christi, Shreveport, El Paso, Albuquerque, Tucson, and Dallas, establishing Granite Granite as a trusted regional name in natural and engineered stone. Alongside that expansion, the collection broadened to include marble, quartzite, semi-precious stone, sinks, porcelain wall panels, and cabinetry - creating a complete surface offering under one roof.

In 2015, we introduced Quantum Stone: a premium quartz collection engineered for clarity, durability, and timeless design. Built for America, Quantum Stone was created to meet the rising demand for high-performance surfaces, elevating residential and commercial projects alike with consistent quality, refined aesthetics, and enduring performance.

Today, Granite Granite serves homeowners, designers, fabricators, builders, and developers across the Southwest - and Quantum Stone remains one of our signature brands, a reflection of our commitment to craftsmanship, innovation, and design excellence.

Our Core

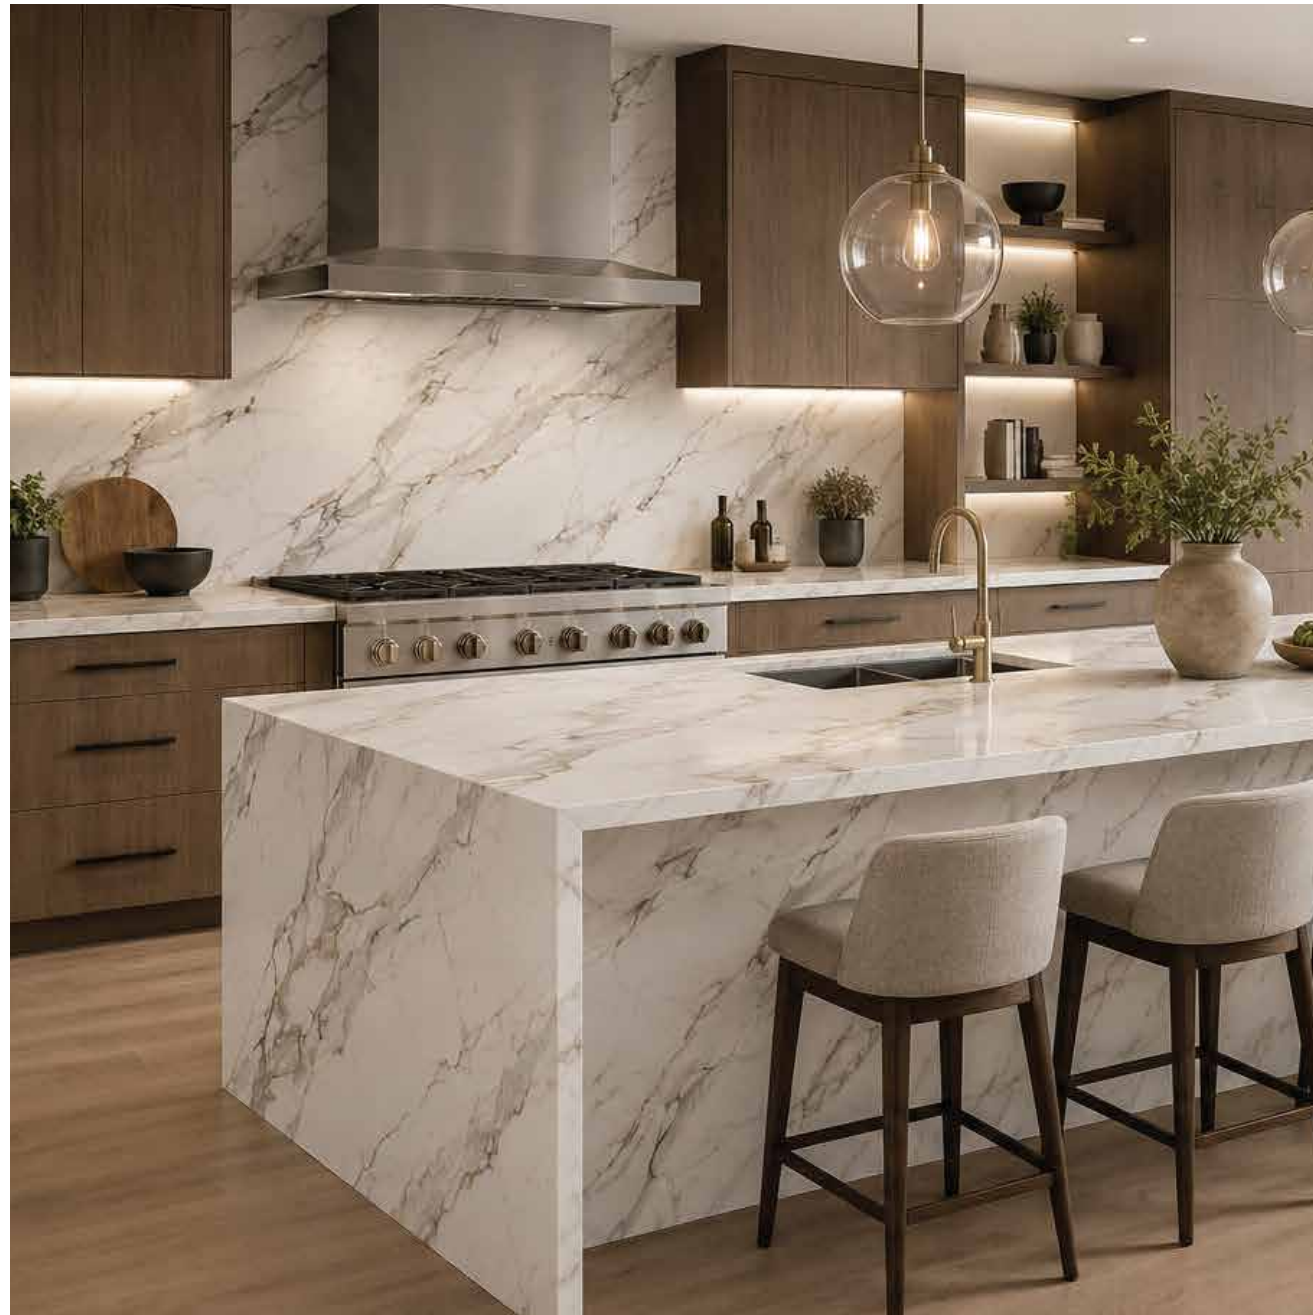

Quantum Stone represents the pinnacle of engineered quartz - a premium collection crafted from one of the earth's hardest minerals and engineered for exceptional beauty and performance. Built for America, it is designed to meet the demands of modern living, combining quiet sophistication with the durability a working kitchen demands. Resistant to stains, scratches, and everyday wear, each surface brings lasting performance and refined beauty to the home. Its refined palette of contemporary colors brings a modern sensibility to interiors of every scale.

Because Quantum Stone is dense and completely non-porous, it never needs sealing or refinishing, and its naturally hygienic composition resists bacteria for the life of the surface. The result is a countertop that performs as beautifully as it looks - engineered to stay that way for years to come.
